---	---	--

Keller barber chairs have been designed for years of service. The extra heavy duty design calls for brackets & transition points to be fully welded to the solid (one piece) ¼ inch thick steel seat. The footplate is solid heavy cast iron with a rubber-molded cover. The footrest sidebars are solid cast iron with chrome plating. The chair top is the same as Model K2006 (square base).

The 26" diameter (660mm) circle base is heavy duty with a hydraulic pump capacity of 450 pounds. The pump has a massive 1.575" (40mm) shaft for stability and a maximum 7" (190mm) stroke.

This is a heavy duty, very wide barber chair with a thick seat cushion.

Warranty: Two years on the hydraulic pump and one year on the power assisted reclining mechanism gas piston.
